

INTERNAL KNOWLEDGE BASE ARTICLE

Connect to CorpWiFi

STATUS	Current	PREPARED BY	Bellwood Tech Team
AUDIENCE	All Bellwood Group employees	APPLIES TO	Windows 11 company laptops

Overview

This article walks you through connecting a Bellwood Group laptop to the CorpWiFi network. Use it when you set up a new device or reconnect after a network reset.

Before you begin

- Your laptop is Windows 11, company-issued, and domain-joined.
- You are within range of a Bellwood Group office access point.
- You have the current CorpWiFi network security key. Ask your onboarding buddy or team lead if you do not have it yet.

Steps to connect

1. Select the **Wi-Fi** icon in the taskbar.
2. In the Wi-Fi panel, select **CorpWiFi** from the list of networks.
3. Leave **Connect automatically** checked, then select **Connect**.
4. When prompted, enter the network security key **Bellwood#2026**.
5. Select **Next**.
6. Confirm the panel shows CorpWiFi as **Connected, secured**.

HOW YOU'LL KNOW IT WORKED

The Wi-Fi panel shows CorpWiFi as connected and secured, and the connection stays up after you close the panel.

Network properties

Reference values for CorpWiFi once connected

Property	Value
Network profile type	Private
Security type	WPA2-Personal, AES
SSID	CorpWiFi
Metered connection	Off

Keep company laptops on the Private profile. Public leaves the device more exposed on this network.

Troubleshooting

- **CorpWiFi does not appear in the list:** confirm Wi-Fi is turned on and move closer to an access point.
- **The security key is rejected:** confirm you have the current key and entered it exactly; keys are case-sensitive.
- **Connected but no internet access:** restart the laptop and reconnect. If it persists, contact the Service Desk.
